

**Materials:** Number Cards 1-10 (4 of each), counters, pencils, paper

**Number of players:** 2

**Directions:** Players sit on opposite sides of the board and take turns to turn over the top card in the deck. The player doubles the number shown on the card and subtracts one. The corresponding number on the board is then covered with a counter. For example, if a 5 is turned over the number 9 is covered because  $5 + 5 = 10$  and  $10 - 1 = 9$ . The player says the doubles minus one fact aloud and records it on paper. If the number is already covered the player must pass. Play continues until one player has covered all numbers on his/her side of the board.

I know that double \_\_\_\_ is \_\_\_\_ .  
\_\_\_\_ minus one equals \_\_\_\_.
